syngo MammoReport

System configuration

Remarks

- A note must be made on all room plans that are created by the Planning Departments which makes reference to the General Installation and Delivery Conditions of Siemens Medical Engineering. A copy of the General Installation and Delivery Conditions must accompany the plans when they are turned over to the customer.

- When planning the space, the documents which apply for the specific fire safety technical regulations must be observed.

- Unless otherwise stated, all dimensions are in mm.

- Room lighting:
  For the constancy test according to DIN 6868-57, it must be possible to dim the lighting in rooms in which diagnostics is made on image display devices (monitors).
  For the constancy test, it is also required that the value documented in the acceptance test must be exactly reproducible.
  According to DIN 6868-57 (the international standard is still in preparation) the lighting in rooms where diagnosis is performed using image display devices (monitors) must meet the following requirements:

  - Adjustable, glare-free and reproducible setting of illuminance (e.g. dimmer with scale),

  - No reflections from windows, lamps and viewing boxes when the monitors are in their standard operating position.

Safety

The product-specific safety information contained in this document, as well as the general safety information must be observed.

NOTICE	**Bear in mind that this product is intended to be used in a non-patient environment.**

Requirements

It is very important that the customer is well prepared for the installation of the *syngo* MammoReport system. In order for the *syngo* MammoReport system to work as intended, an archive or printer solution is needed. Also make sure to complete the forms in this document as thoroughly as possible, and keep them available for the installation to facilitate the procedure.

NOTICE	**VERY IMPORTANT NOTICE!**
	To enable monitor calibration according to the DIN6868-57 standard, SIEMENS strongly recommends that the SMfit ACT monitor calibration tools are purchased (including spot meter).
	The DIN6868 plug-in which is also required is not included in SMfit ACT - it is available at a cost to the customer.
	Instructions on how to perform quality control and calibrations using the SMfit ACT tool are described in the Quality Control Manual for *syngo* MammoReport.

syngo MammoReport

System overview

The *syngo* MammoReport system's major parts are:

- 2 Displays (either CRT or TFT)
  - CRTdisplays: SIMOMED SMM21201P
  - TFT displays: DSB 2103-D-5MP, Barco MFGD 5621 HD , or Planar (model C5i)

- PC workstation

- Workflow keypad

- syngo compatible monitor

- syngo keyboard

- *syngo* MammoReport software

- Windows XP compatible printer, provided by the customer

NOTICE	**The customer must provide a printer to be able to print reports.**

High resolution monitors (CRT/TFT)

Syngo compatible monitor

Workstation table

PC workstation

Workflow keypad

syngo keyboard
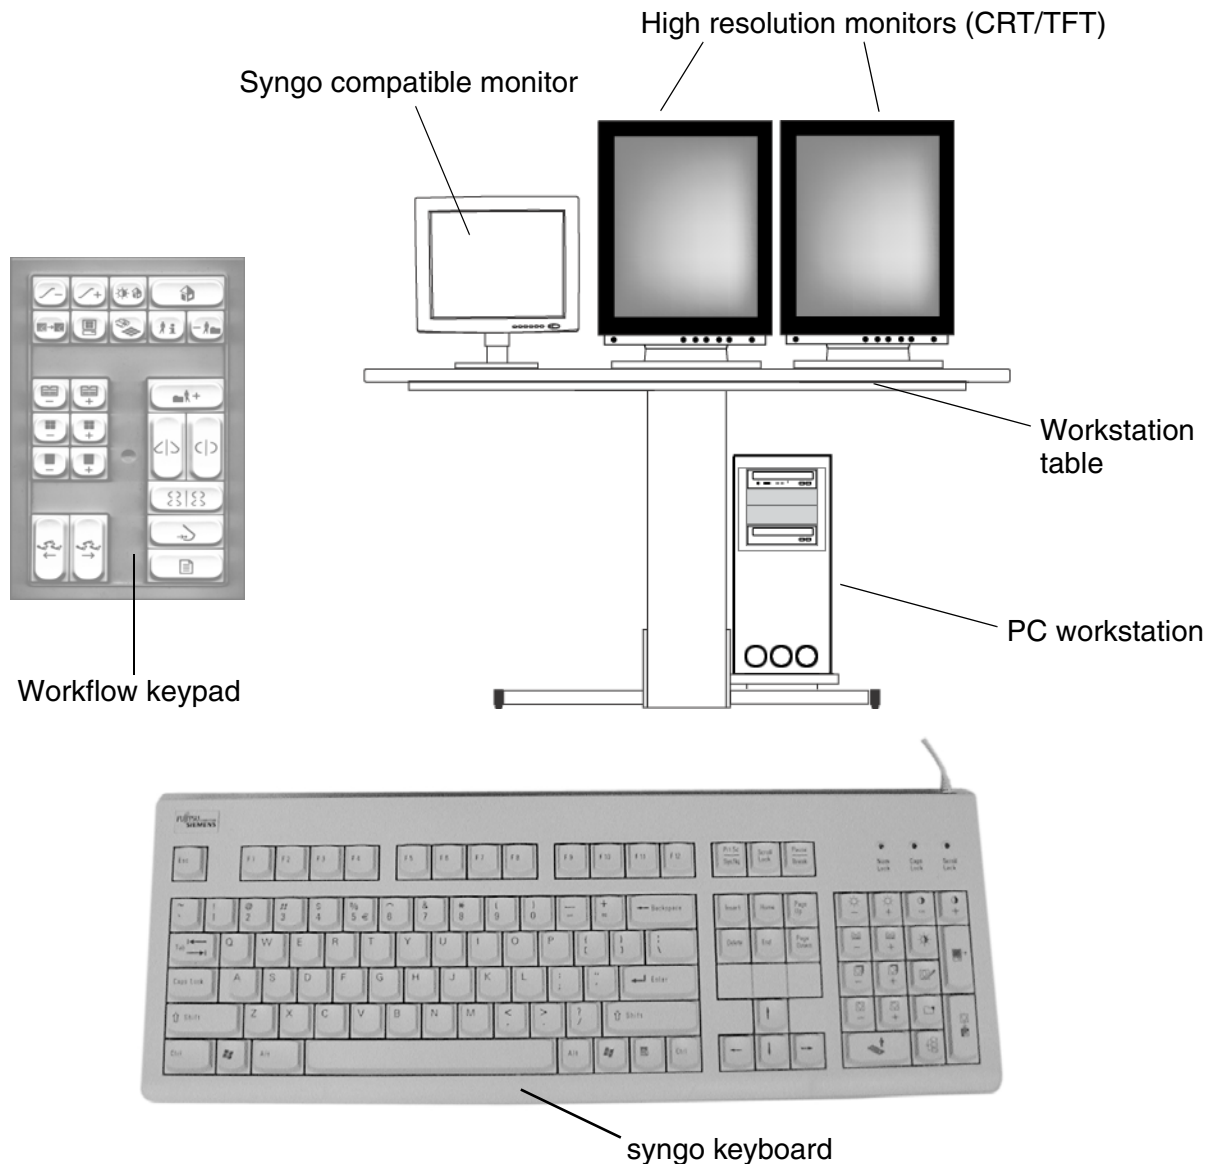

Additional options for the *syngo* MammoReport system are:

- 1 x 147 GB hard disk (for R610)
- 1 x 300 GB hard disk (for R630)

NOTE	**For actual system options, see price book.**

NOTE	**The side table has to be provided by the customer.**
	If the workstation station table (option) is not ordered, the table must be provided by the customer.

Network

The *syngo* MammoReport workstation supports the TCP / IP protocol. Due to the data throughput that is required, we urgently recommend the use of a 100 Mb/s switched network or higher. Please note that any required network cabling, as well as the required connector outlets must be available on site. If necessary, an outside service contractor must be brought on site.

Software installation

The *syngo* MammoReport workstation is shipped with the softcopy reading software preinstalled, but will need customer specific settings configured.

Software configuration

The configuration of the *syngo* MammoReport workstation software requires approximately 2 hours.

Hardware configuration

The configuration of the *syngo* MammoReport workstation hardware, monitor calibration etc., requires approximately 2 hours.
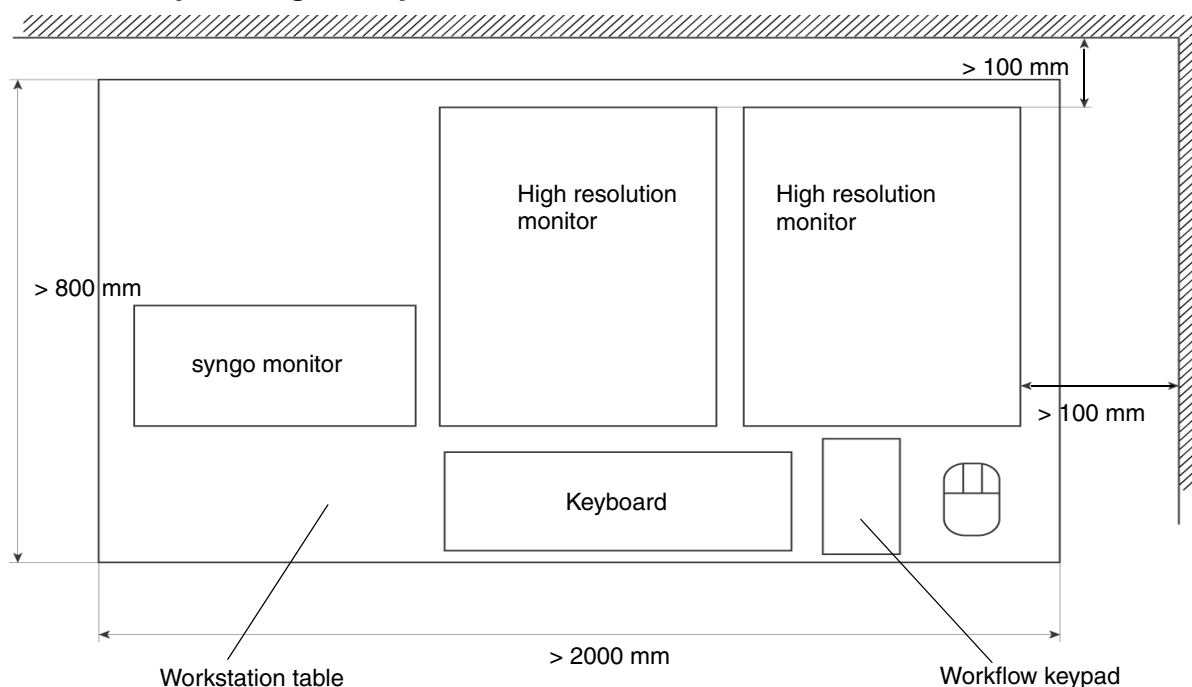

Acronyms and abbreviations

AE Title (AET)	DICOM Application Entity Title. Must be unique in a DICOM network.
AWS	Acquisition Workstation.
Conformance	Each manufacture of a DICOM device has to provide such a statement which gives an overview of the product's DICOM capability.
CR	Computed Radiography IOD, e.g. used by the DIGISCAN M.
DICOM	Digital Imaging and Communication in Medicine.
DHCP	Dynamic Host Configuration Protocol. Reduces the complexity of configuring computers for TCP/IP networks. The following TCP/IP configuration can be dynamically assigned by a DHCP server: IP Address, Subnet masks, gateway and additional parameters like domain name.
DNS	The Domain Name Service is used to resolve the TCP/IP address from a "user friendly host name".
Hub	Distributor in a network using the star topology.
IP Address	32-bit address assigned to hosts using TCP/IP. An IP address belongs to one of four classes (A, B, C, D) and is written as 4 pairs separated with periods (decimal point format). The IP is part of the socket address. Here, IP means Internet Protocol.
SMPTE	Society of Motion Picture and Television Engineers
MG	Digital Mammography.
Q/R	Query / Retrieve is a service class which provides the ability to retrieve/transfer a well-identified set of images.
Port	Part of the socket address. Different DICOM services on the same host PC may use different port numbers.
Subnet mask	The subnet mask is used to extract network and sub network information from the IP address.
Router	A device that connects different networks. In a TCP/IP environment a router is used to connect computers that are located in different IP address ranges.
Service Class	A structured description of a service which is supported by cooperating DICOM Application Entities, e.g. Storage Service Class.
SCP	Service Class Provider, e.g. a Storage Service Class Provider provides the capability to receive DICOM images from a DICOM AET Storage SCU.
SCU	Service Class User, e.g. a DICOM Storage Service Class User can send an image to a DICOM Service Class Provider.
TCP	Transfer Control Protocol.
UI	User Interface.
USC	Uptime Service Center.
WINS	WINS provides a distributed database for registration and querying dynamic Net-BIOS names to IP addresses.

High resolution monitor

syngo monitor

> 100 mm

Keyboard

Workstation table

> 2000 mm

Workflow keypad

This example places the PC workstation underneath the workstation table. The room planning should also be prepared so that there are no power cables/transformers adjacent to the monitors. The monitors should also not be closer than 15 cm to other units.

To comply with the requirements in DIN 6868-57 and to provide optimal viewing conditions for diagnosis, lighting conditions in the room around the *syngo* MammoReport need to ful-fil certain conditions. This is important to ensure that viewing of especially the darkest grayscale levels is not interfered with.

The *syngo* MammoReport monitors must be placed to avoid direct illumination and reflec-tions on the monitors from light sources such as windows, lamps and light boxes. When viewing images on the *syngo* MammoReport, the illumination must come from diffuse light sources and it is recommended that the ambient light level is below 10 cd/m^2. The moni-tors should also be illuminated as evenly as possible from different directions.

NOTE	For cable lengths, see Page 4 - 1.
	The *syngo* MammoReport should be installed in a room separate from the acquisition system.
	The side table is provided by the customer.

Permissible relative air humidity

NOTE	Make sure that the room environment satisfies the requirements for relative air humidity, see "Heat dissipation data and environ-mental conditions" on Page 5 - 1. An air humidifier or an air dehu-midifier might have to be installed.

NOTE	If additional SIENET components are added or if there is integration into a SIENET network, SHS/PACS P (Project Engineering) must be contacted.

Uninterruptable Power Supply (UPS)

⚠CAUTION	To ensure that no data (patient data, image data) get lost if there is an unstable power supply and to protect the operating system (with all components), we recommend that you install a UPS.

DICOM compatibility

The following table gives a short overview of the products compatible with the acquisition workstation. For a more detailed information please check the DICOM conformance statements. The inter-operability with foreign products might be complex and must be clarified before starting the installation.

NOTE	**For further information please refer to:**
	http://www-td.med.siemens.de/Product Information/Planning/ General...
	DICOM Planning Guide, TDIT-000.891.02... .

This page intentionally left blank.

Weight specifications

The system will be delivered on 2 standard pallets, weighing approximately a total of 130 kg (with SIMOMED SMM21201P) resp. 90 kg (with DSB 2103-D-5MP).

Component weights and dimensions

	Weight [kg]	Dimension (HxWxD) [mm]
PC workstation	25	451x205x603
syngo monitor	8.7	408-468 x 420 x 210
SIMOMED SMM21201P	2 x 33	580x403x520
DSB 2103-D-5MP	2 x 13.3	521x384x263
Planar C5i (TFT)	2 x 6.9	512-590 x 406 x 239
BARCO MGFGD 5621 HD (TFT)	2 x 13.5	592x408x217
Workflow keypad	-	50x118x198

⚠**CAUTION**

The High resolution monitors are heavy.

Always handle the high resolution monitors with two persons in order to avoid injuries.

Table weight support

- The Workstation table must be able to support a weight according to the Weight specifications.

- The side table must be able to support a weight of 6 kg resp. 10 kg minimum (the syngo monitor).

⚠**CAUTION**

The supported weight specified for the tables is not valid if other equipment not belonging to the *syngo* MammoReport system is placed on the tables.
